
How many signal base stations are there in Honiara

How many 3G/4G base stations are there in the Solomon Islands?

The project plans to construct 161 3G/4G wireless communication base stations on 35 major islands in the Solomon Islands' nine provinces. The construction, to last for three years, started on Aug. 28, 2023, with the first telecommunication tower launched on March 22 in Sali village. (Xinhua/Zhang Jianhua) By Zhang Jianhua, Zhang Na

Why are metal pylons being built in Honiara?

HONIARA, July 8 (Xinhua) -- Near a scattering of once-isolated villages just 30 km from Honiara, capital of the Solomon Islands, metal pylons are being erected to weave a modern network for the South Pacific country. The communication base stations are spotted through palm groves and sparsely populated grass huts, next to ancient rainforest.

How many mobile devices can a base station serve?

Each base station can only serve a limited number of mobile devices at a time. As the number of mobile devices in a community grows, more base stations are needed. For that reason, more antennas are needed in such crowded locations as shopping malls where there are many mobile phone users.

Do mobile phones need a base station?

Mobile phones and other mobile devices require a network of base stations in order to function. The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from mobile phones near the base station. Without these radio waves, mobile communications would not be possible.
