# Install solar panels on the roof of the glass garage exit

Can you install solar panels on a garage?

You can use the roof of the garage to install solar panels. This extra space will allow you to install a solar panel on an unused roof instead of the home. Besides, solar power will help you operate the door even in power outages if you use power doors. It's an advantage that you can not expect from the grid.

How do solar panels work on a garage roof?

Garage solar panels connect to your home just like house roof ones. They feed into an inverter that converts solar energy into usable power, which then goes to your fuse box and gets distributed across your property to power your appliances and lights. Where do you want to install solar panels? How much do solar panels for a garage roof cost?

Can solar PV be installed on a garage roof?

It can be easy to install solar PV on a garage within a property boundary, especially if the garage already has an electricity cable running to it. If there is a cable linking the garage and the main house, that would be able to support the PV system, a install on a garage roof can be straight forward.

How much do solar panels cost on a garage roof?

The cost of installing solar panels on your garage roof can vary, but based on our research in March 2023, the average price for a three-panel setup is £2,108. For a larger system of six panels, you'd be looking at an average cost of £4,216.
