# Roller type uninterruptible power supply

What is an uninterruptible power supply (UPS)?

Uninterruptible power supply (UPS) is a crucial component in the data center power system for providing backup power when the primary power source fails. Not all UPS systems are the same. They vary greatly in topology, size, capacity, form factor, etc.

What are the different types of uninterruptible power supplies?

There are two main categories of uninterruptible power supplies (UPSs)1,static and rotary. As the name implies,static UPSs do not have any moving parts in their con- verters,whereas rotary UPSs use mechanical parts that rotate,such as motor/gen- erators,to function. This paper focuses only on static UPSs.

What are the different types of UPS systems?

It also outlines different types of UPS systems--standby,line-interactive,and continuous--and compares them in terms of functionality,cost,and application,while highlighting alternative solutions like motor-generator sets. One method of protecting sensitive equipment against power interruptions is the uninterruptible power supply (UPS).

What does "ups power supply" mean?

A quick note on naming conventions...In the context of tech hardware,the acronym UPS stands for uninterruptible power supply,and so technically the phrase 'UPS power supply' is a handy example of RAS syndrome (along with 'PIN number' and 'LCD display')!
